

The Company

DDC is a Wolverhampton based small-to-medium sized enterprise supplying CAD related engineering solutions to the construction industry. The company was established in 2000 by managing director Dean Whitbrook who has over 20 years experience in engineering and surveying .

DDC specialise in 2D / 3D design for industrial units and supply into motorway management systems. Over the last six years the firm has built up a reputation for producing quality work within demanding timescales.

The Brief & Project

Recently DDC has focused on expanding its operations. The management realised great potential for supply into the National Motorway Network. The network required input into an identification programme with the ultimate aim of point fixing motorway utility services to enable accurate maintenance and improvements in data availability.

The company approached WMCCCE to assist speeding up the process of data manipulation. Working with teams of surveyors, DDC needed the ability to convert co-ordinates into accurate mapping format efficiently and quickly.

The project demanded total system knowledge and creative system support to come up with a suitable solution.

Project Outcome

Project Start: August 2006

Project Finish: November 2006

As a direct result of this project DDC were able to satisfy their customer and handle contracts with great efficiency and speed. DDC have secured a number of new contracts and are leading the field in this sector.

In the long term DDC expect to create new jobs within the business and increase company turnover.
